

Resilian.IQ™

Emergency Management
Powered by IEM

One Platform From Preparedness to Recovery

Resilian.IQ™ gives Emergency Managers a single, AI-powered environment to plan, assess, and recover across every jurisdiction they serve.

Resilian.IQ™ is IEM's next-generation emergency management and disaster recovery platform. Designed by practitioners who understand the demands of a declared disaster, it brings planning, response, and recovery together in one place so data stays accessible and usable in every phase. Powered by AI and integrated with Microsoft 365, it keeps pace with even the most complex multi-jurisdiction operations.

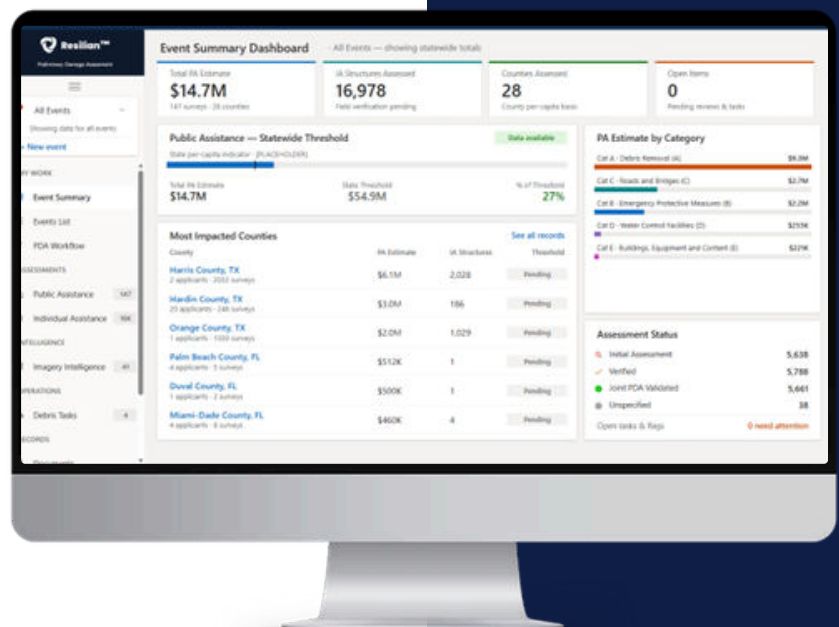

Everything Your Team Needs, One Event-Centered Environment

Resilian.IQ™ brings planning initiatives, Public Assistance (PA), Individual Assistance (IA), imagery intelligence, debris tracking, documentation, and event-level reporting into a single interface. It supports the Preliminary Damage Assessment (PDA) process from initial collection and field verification through impact analysis and recovery decisions.

- **One event-centered environment** for PA, IA, imagery-derived estimates, debris tasks, notes, documents, and FEMA reference material
- **Faster plan development** through AI-generated content grounded in authoritative templates
- **Survey data that rolls up automatically** into county, applicant, FEMA category, threshold, and executive dashboard views
- **Imagery-assisted records** so field teams validate and complete existing estimates instead of re-collecting every data point
- **Connected evidence** that keeps verification status, confidence, eligibility information, and notes tied to each assessment record
- **Clear threshold visibility** so decision-makers see exactly how close they are to state and county declaration thresholds
- **Secure, cloud-ready architecture** aligned with Microsoft 365 and Power BI

Key Capabilities

- Automated workflows with role-based access and task notifications
- Seamless integration with external systems and datasets
- AI-generated plans with human review built in
- Imagery-assisted damage assessment
- Automatic report generation
- Dynamic, customizable dashboards
- Full audit capabilities
- Mobile capabilities
- Rapidly deployable and scalable on a commercial platform
- Secure cloud infrastructure
- Industry-leading security certifications

What Can Resilian.IQ™ Do for Your Agency?

Enhanced Collaborative Work Environment

See every plan, project, and task in a single dashboard across departments, jurisdictions, and planning cycles. Planners and supervisors gain instant visibility into what is active, what is pending, and what needs attention.

Live Compliance & Secure Collaboration

Resilian.IQ™ integrates with Power BI to surface real-time metrics on plan status, completion, and compliance, so gaps surface before an audit or exercise does. Staff sign in with existing Microsoft 365 credentials for secure, role-appropriate access.

Enterprise Ready for Government

From statewide deployments to local emergency management offices, Resilian.IQ™ is built to support complex governance structures, multi-agency planning workflows, distributed review cycles, and audit-ready documentation trails.

Build Stronger Plans in a Fraction of the Time

Generate plan content, update sections, and produce structured planning documents using IEM's proprietary AI tools, now natively integrated into the Resilian.IQ™ experience. Build higher quality plans in a fraction of the time, with outputs grounded in authoritative templates and planning best practices. ***Your people stay in control, and every action is captured in a full audit trail.***

Faster, Clearer Damage Assessments

After an event, agencies must coordinate surveys, imagery, evidence, and cost estimates across jurisdictions. Resilian.IQ™ organizes it all around one disaster event, so field teams and decision-makers work from the same picture.

Built for the Way Planners Actually Work

Upload, view, and manage Geographic Information System (GIS) files, maps, shapefiles, Word documents, PDFs, PowerPoint decks, and spreadsheets directly inside the application. No formatting hassles, no file type limitations. Just clean, planner-friendly workflows. Resilian.IQ™ is flexible across planning missions, including:

Emergency Operations Plans (EOP)

Hazard Mitigation Plans

Emergency Support Function (ESF) annexes

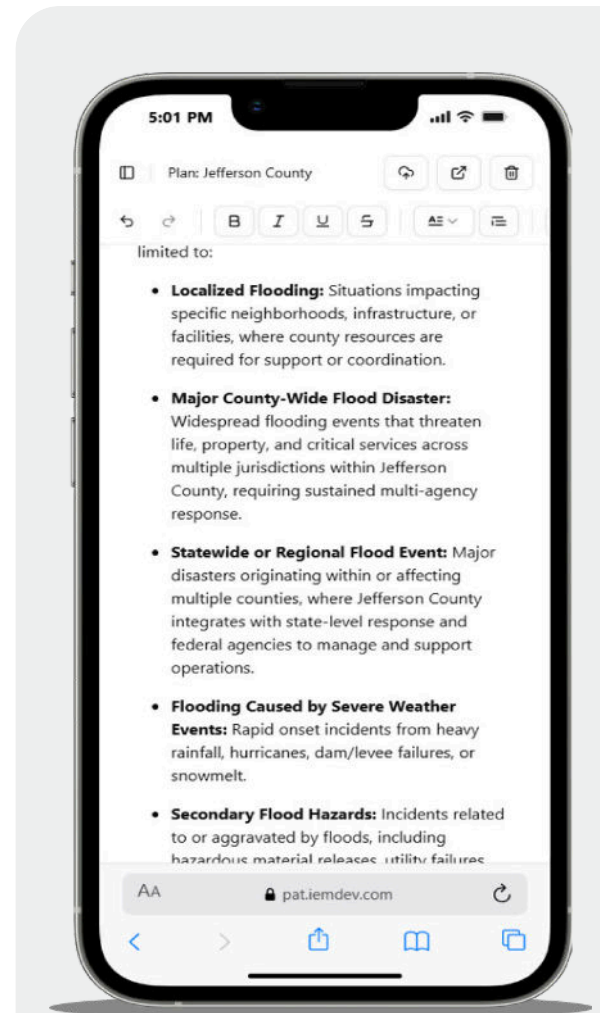

Continuity of Operations (COOP)

Multi-jurisdiction regional plans
